Swapy is a simple, yet handy application that provides you with an easy to use automation tool. The name stands for Simple Windows Automation on Python. The application displays a list of all the running programs, enabling you to view their corresponding controls and access the available commands from the rightclick menu. Selecting a

command will display the native Python code in the Editor pane. Features: \* List of all running programs, with program-specific controls displayed as a right-click menu \* Shows help, exit status and read the registry for each process \* View program's current settings \* Execute Python commands from an empty script \* Access to all commands available in Windows: \* Control any kind of process

from within Python \* Control any Windows application using an external application, or directly from within Python Limitations: \* Runs as a Windows service, only compatible with Windows OS: Vista, 7, 8, 8.1 and 10 Additional feature requests: 1. Select the program you want to interact with. 2. Select the command to perform the action you want (e.g. 'Open File', 'Start Process', 'Save the File',

etc.). 3. Select the command you want to perform and execute the script. 4. Execute the script directly from within the file explorer. The usage of Swapy is simple: \* Open the Swapy application. \* Click on the program you want to work with. \* Click on the command you want to execute. \* Click the 'Execute' button. To see how the application works, read the Getting Started tutorial or browse the examples below.

Examples: \* List of all running processes: ```python swapy.exe ``` \* List of all running processes, filtered by UserName: ```python import win32api process list = win32api.GetProcesses() process list by user = [p for p in process list if p.username() =='S-1-5-32-544'] ``` \* List of all running processes, filtered by UserName and process id (PID): ```python import win32api process list =

win32api.GetProcesses() process list by user = [p for p in process list if p.username() == 'S-1-5-32-544' and p.pID() == 4944] ``` \* List of all programs using an external program: ```python import win32api program list = win32api.GetProcesses() program list by external = [p for p in program list if

OS: Windows 10 Processor: Intel® Core™ i3 RAM: 4GB **HDD: 8GB Connection:** Broadband Internet (or Wi-Fi) Sound card: DirectX compatible sound card We have been working on a new mod pack for you, and this is the first big one we've made. It contains five mods, including of course (as I stated previously) the awesome Craft World. It has

## also included the Oceanic and Overwater Flora, and we also added a coastline for you. It also
